Installation

FOUNDATION DIAGRAM

unit:mm

ITEM TYPE	A	B	C	D
1640G	2000	675	740	1970
1660G	2508	675	1248	2478

Installation

2-4 LEVEL OF LATHE

Anchor bolts and installation blocks must be fixed steadily to the cement

For Alignment of the machine ,spirit level which has sensitivity Better jan 0.02mm/1000mm, on guideways of bed,adjust the level of the bed-way from left to right,then adjust the level of saddle, both front and rear,make sure the sensitivity is within 0.04mm/1000mm

After the adjustment of level, fasten the nuts, if fastness is deviated by fastening nuts, adjust it again untill no deviation is found.

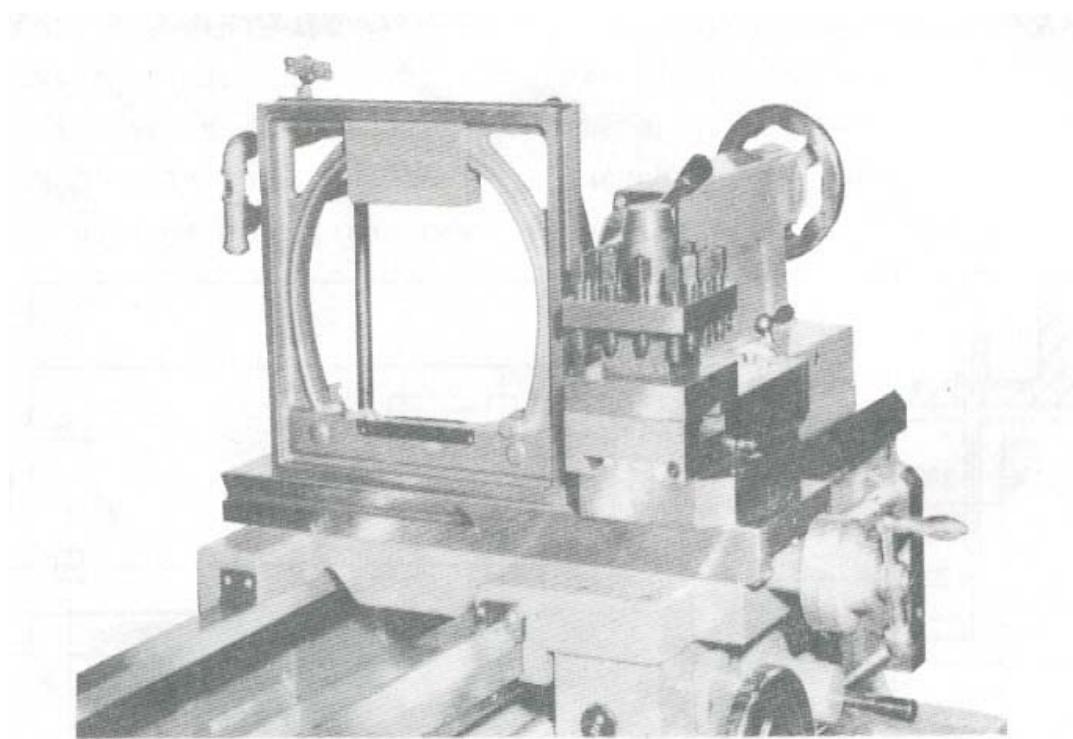

Fig 3

Power Security Control

3-1 POWER SOURCE WIRING

Fig 4

3-2 ELECTRICAL SAFETY FEATURES

- 1) The control panel of this machine is equipped with magnetic contactor and overload thermal relay.
- 2) Forward/reverse level and limited microswitch are connected.
- 3) Pedal brake device is connected to limited microswitch.
- 4) There is a jogging switch push button in the higher right hand side of norton feed gear box.

3-3 CAUTION

After wiring, check the spindle rotating direction. Turn on the power source switch and push the jogging switch button. If it rotates counterclockwise, it is the correct wiring. If not, replace two of the three wires (r.s.t). Then check the rotation again.

The overload thermal relay is connected to the magnetic contactor to protect from motor overload. If during normal operation, but the pilot light is still on, it indicates that the overload thermal relay is working. Please turn off the main power switch, reset the thermal overload relay and restart the machine.

Prepaatiion for opertion

4-2 OPERATION OF JOGGING SWITCH PUSH BOTTON

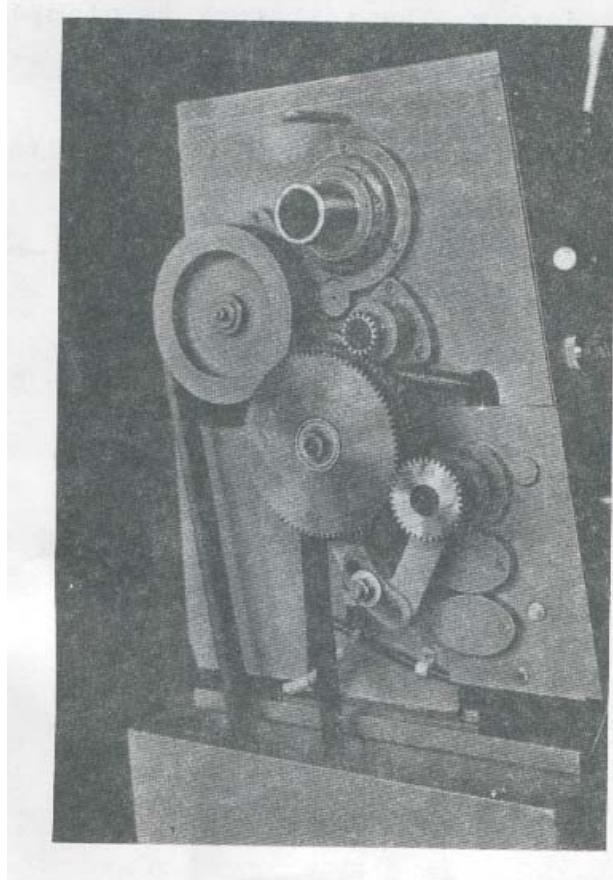

There is a push botton 23 in the higher portion of norton feed gear box (see Fig 7). Push it slightly. The spindle will run positively and Stop automatically. This is for changing speed easier And adjusting the center for raw ,material when a 4-jaw chuck is used.

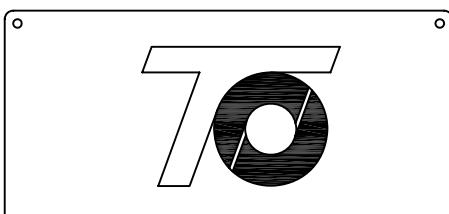

4-3 CHANGE GEAR SYSTEM

the change gear ssystem is located at the left side of the Headstock. Please refer to thread cutting chart, table 2, Be sure that the gears are aligned after you have changed them.

Caution Don't attempt to change gears while spindle is rotating.

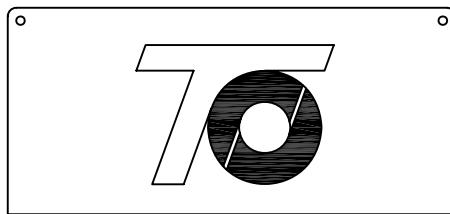

Don't change speed
while rotation

Preparation for operation

For longitudinal feed, push down lever 13. For Cross Feed, pull up lever 13. Please refer to Table 2.

4-4 MANUAL FEED

Carriage moves longitudinally by turning hand wheel 11 (Be sure to set lever 7 and 13 at neutral position, and pull levers 14 up). One division of hand wheel dial is corresponding to 0.006" and its one turn corresponds to 0.72" travel of carriage.

4-5 AUTOMATIC FEED

Automatic feed is operated as follows:

- 1) Choose feed direction by lever 7.
- 2) Set change gears and shift levels 8 & 9 & 31 to desired feed value.
- 3) Shift lever 10 to feed position.
- 4) Pull lever 14 up.
- 5) Feed Selector 13 to select either longitudinal feed or cross feed.
- 6) Shift lever 19 to select direction of spindle rotation.
- 7) Automatic feed starts when 32 lever is operated and stops when it is pulled up to neutral position.

4-6 SWIVEL SLIDE

Loose two capscrews before swiveling it. (As shown Fig 8)

Fig 8

4-7 TAILSTOCK

Tailstock spindle moves out by turning hand wheel 29. Either the arbor of drill chuck or tailstock spindle center comes out by excess returning of tailstock spindle.

Tailstock Spindle is clamped by pushing lever 20 reverse to headstock. The tailstock is clamped by pulling lever 21 upward. One division of its hand wheel dial corresponds to 0.125" travel of tailstock spindle.

Thread cutting

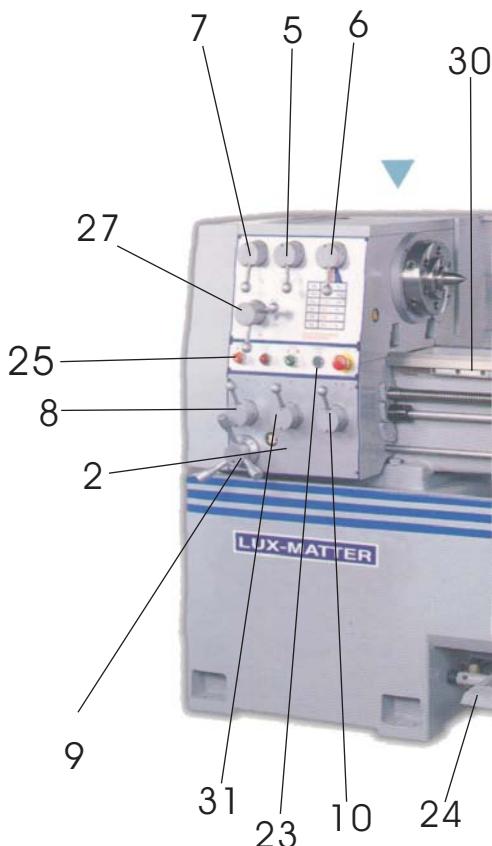

5-1 LEADSCREW OPERATION

Shift the level 7 to the right or left, the leadscrew run forward or reverse rotation respectively.

5-2 INCH THREAD SYSTEM

The inch thread cutting is operated as follow:

- 1) The change gears are aligned according to the Table 3.
- 2) Then according to Table 4.
Shift levels 8 & 10 & 31 to the desired position. Put level 9 to one of 8 positions.
- 3) Shift level 19 to select direction od spindle rotation.
- 4) Push lever 14 down (half nut engaged) to start threading.

5-3 THREAD CUTTING INDICATOR

The thread cutting indicator installed on the headstock tag which has eight gradauaions. For cutting inch thread, the thread cutting indicator is prepared for correct position of half nut engaging conveniently and quickly.

As to metric thread cutting, half nut should be engaged with lead-screw completely(when leadscrew is inch). Let tool post back up to starting position by reversing spindle rotation, then again.

INDICATOR TABLE					
T.P.I.	SCALE	T.P.I.	SCALE	T.P.I.	SCALE

MAINTENANCE

LUBRICATIONS

LUBRICATION IN HEADSTOCK & NORTON FEED GEAR BOX

Oil-bathed lubrication for both gear boxes. Please be sure the oil no lower than min.

Level of oil window

Lubrication in Change gears (Transmission gears) Open the V-belt cover. Lubricating with oil for daily maintenance.

LUBRICATION IN CARRIAGE

Carriage Slides and Cross Screw to be oiled by Hand PUMP.

LUBRICATION IN APRON

The oil cap in the right hand side of apron are for oiling. Be sure oil on proper height of oil window. To change the oil in apron the oil can be removed by taking off the drain plug at bottom of apron.

LUBRICATION IN BEDWAYS, LEADSCREW

And Leadscrew Bracket Hand oiling is required from time to time

Coolant for Cutting

The coolant pump control switch is located top of Norton Feed gear box. The pump works while turn on.

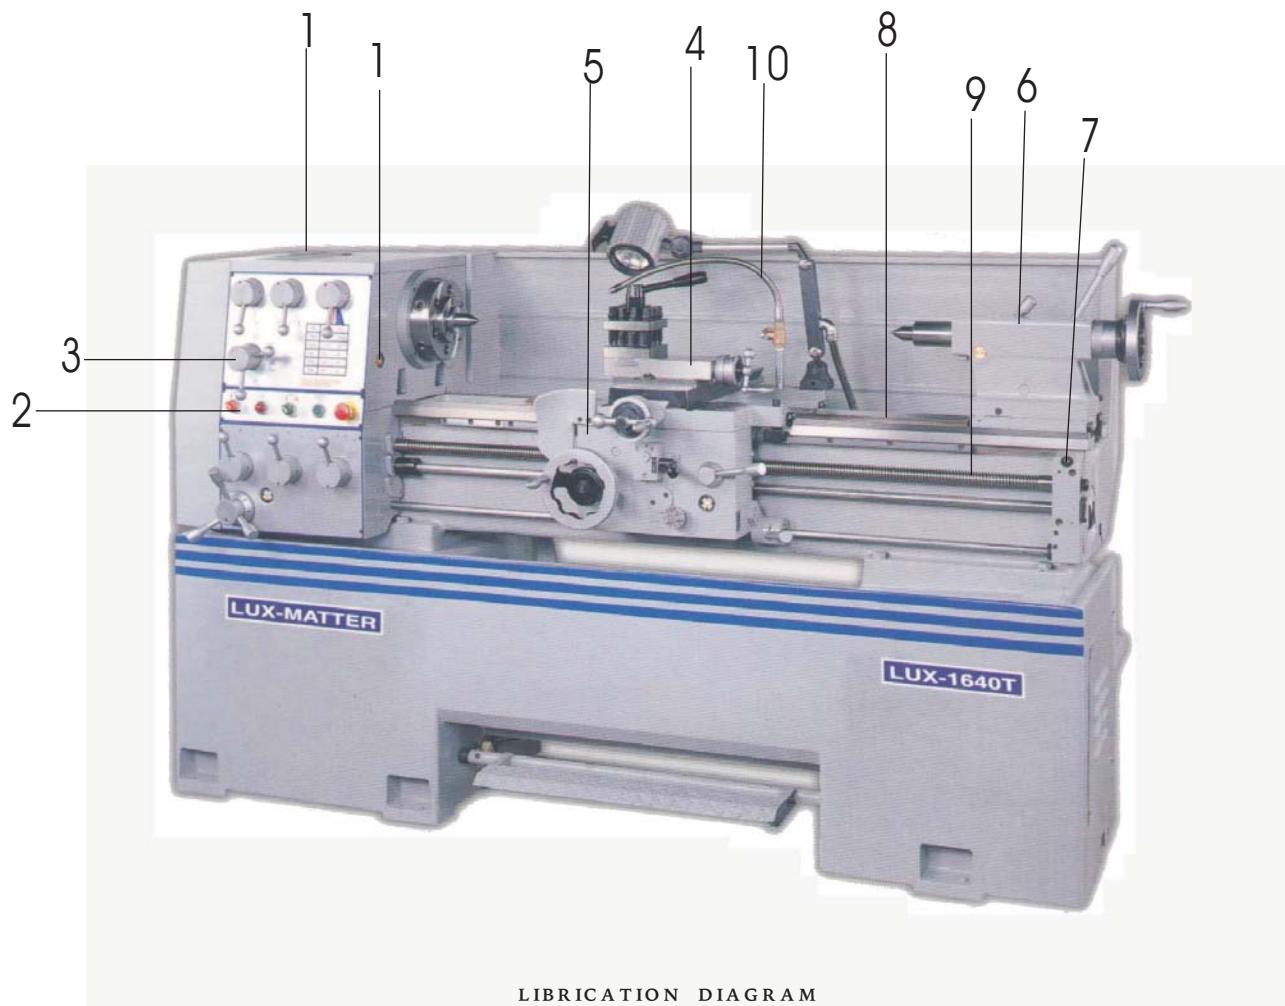

MAINTENANCE

TROUBLE SHOOTING CHART		
TROUBLE	PROBABLE CAUSE	CORRECTION
Vibration	Loose leveling screws Torn or mismatched vee belts Work or chuck out of balance Operating at high spindle speed Motor out of balance	Set all screw so they bear evenly on leveling plates Replace vee belts with matched set or adjust roll Balance chuck or reduce spindle speed Contact local representative of motor manufacturer
Chatter	Tool bit improperly ground or not on center Tool overhang too great Using improper surface feet Feed rate too high or too low Gibs of cross slide or pound rest loose Spindle bearings worn	Regrid tool bit or adjust tool holder so that area of contact between tool bit and work is decreased, Avoid extreme negative rake angle Keep point of tool bit as close as possible to tool holder Recue or increase feed adjust gibbs adjustspindle bearings
Chatter (cont'd)	Work Imporoperly supported Vibration Spindle bearing loose	Adjust tailstock center Use steady rest of follow rest. On long slender shafts Minimize tailstock barrel extension Adjust spindle bearings
Work not turned straight	Headstock and tailstock Centers not aligned Work improperly supported Bed not level Tool not on center when Using taper attachment	Align tailstock center Use strady rest of follow rest Reduce overhang from chuck Relevel bed using precision level Put tool on center
Work out of round	Work loose between centers Or centers are excessively Worn-work centers out of round Loose headstock spindle bearings	Adjust tailstock center Regrind centers.Lap work centers Adjust headstock spindle bearing

MAINTENANCE

TROUBLE SHOOTING CHART

TROUBLE	PROBABLE CAUSE	
Cross slide or compound rest movement does not coincide with dial movement of respective adjusting screw	Gib setting too tight or too loose Eork is too long and slender	Adjust gibs Use steady rest or follow rest
